

INF20029 Assignment 2 Outline – Group (Semester 2 2025)

Words Expectation: 2,500 +/-10%

Weighting: 40%

Due date: See Unit website

Assignment 2 submission details

- All pages should include your group number in the document footer.
 - All references should be appropriately cited using the APA Referencing style.
 - Submit your report as ONE Microsoft Word or PDF document. ONE copy per group.
 - Save your file as follows: [group numberA2.filetype] e.g. group10A2.docx.
 - Submit your final report via INF20029 Canvas> Assignments > Assignment 2.
-

Tasks

- Form project teams of five (5) members to continue developing the same system used in Assignment 1.
- Develop a project management plan outlining key tasks, timelines, and responsibilities.
- Seek clarification or additional information during weekly classes or via the Canvas discussion board.
- Create functional specifications using user stories and use case narratives.
- Design the user interface (UI) and technical solution to support the functional specifications.
- Develop test scripts for the main success scenario and an alternative scenario.
- Prepare and deliver a presentation showcasing the system design.
- Submit a high-level system analysis and design report.

Components

There are three components of the submission.

1. Project management plan
 - Timely submission of the Project Management Plan does attract a few marks as part of your final Assignment 2, so don't get confused that there are no marks attached to this submission link. It is for administrative purposes only.
 - A clear initial Project Management Plan (without team contribution and signature of all team members) will be drafted and submitted to the tutor by the end of Week 9.
 - You will need to provide a second, final version of your Project Management Plan (with team contribution and signatures of all team members) when you submit your Group Assignment 2 at the end of the semester. There will be no separate submission link, so please upload both the Assignment file and the final Project Management Plan file together via the Assignment 2 submission link.
 - Project Management Plan templates can be found in Canvas Assignment 2 module.
2. A high-level system design report

Part A: System analysis and design

- Three (3) user stories per key stakeholders. Write each user story using the standard format and provide four (4) acceptance criteria for each user story related to student enquiry management

- Full use case narrative for 1) student enquiry submission and 2) making student appointments, including:
 - Use case name
 - User story
 - Stakeholders
 - Preconditions
 - Trigger
 - Minimal guarantee
 - Success guarantee
 - Main success scenario
 - Extensions
- A system sequence diagram (SSD) for student enquiry submission based the full use case narrative developed.
- A state machine diagram to represent the lifecycle of a student enquiry, including a brief explanation describing key transitions. Your diagram should include all relevant states and transitions between them based on events or conditions.
- CRUD UI modeling with search/select screens and detail/hybrid screens, for the entity, student enquiry, and two (2) other associated entities. You should provide a CRUD screen navigation diagram and a menu option with user-role access.

Part B: Testing

- Test scripts for the main success scenario and one (1) alternative scenario related to the student enquiry submission use case (using the provided template).

Part C: Discussion

- Based on literature research, discuss the ethical issues and AI governance. Provide a brief (approximately 500 words) discussion supported by evidence from at least five (5) reputable literature sources (i.e., peer-reviewed journals and books).

Appendix (excluded for the word count)

- Document and demonstrate your proper and effective use of generative AI to support diagramming and analysis. The whole artifact development process should be traceable:
 - Include all prompts used with GenAI tools
 - Include raw AI-generated output (e.g., PlantUML/Mermaid code, draft diagrams)
 - Label each diagram iteration (e.g., AI Version 1, Human Revision 1)
 - Use screenshots or code snippets where applicable
 - Explain why each revision of AI-generated output was made (not just what changed)
 - Explain how human revision and inputs (e.g., updated Mermaid code) refine AI-generated content to produce your work or how AI-generated output refine your work
- Refer to the GenAI Use and Acknowledgements page under Assignment module in Canvas.

3. Presentation

- For the use case of making student appointments
- Your group must prepare and present:
 - Title slide - Group number, user story title, team members
 - Team roles - Brief overview of what each member contributed
 - User story and acceptance criteria

- The key steps the user takes in plain language
- System sequence diagram, including validation or decision points where applicable
- Storyboard (3–5 screens), illustrating the interface and how the user completes the task
- Everyone MUST participate in presentations. NO mark will be given to those do not present.
- After your presentation, in the Q&A session, your tutor will ask your group a few follow-up questions to assess your understanding of the scenario, system behavior, and interface design. You may be asked about (but are not limited to) the following areas:
 - The business rules and system logic
 - The storyboard and UI design choices
 - The application of relevant design principles
 - Any assumptions made while designing the solution
- You should not prepare additional slides for the Q&A session. Just be ready to justify your design decisions, system logic, and modeling choices. There are no "trick" questions. The focus is on your understanding, not memorization.

Submission Requirements (**IMPORTANT)

- You must use AI tools to support your work.
- The submission must be your own work, that is, it must be the result of your own readings, thoughts and discussion, and the expression of the ideas must be yours
- Submissions that rely heavily on AI content without evidence of critical thinking, refinement, or traceability will not receive a passing grade for the assignment.
- Plagiarism – the action or practice of taking and using as one's own, the thoughts, writings or other work of someone else – is not condoned by the University and severe penalties will be imposed where plagiarism is detected.

Submission Assistance

- Assistance can be obtained from the Helpdesk (03) 9214 5000 for any technical issues with submitting your assessment into Canvas.
- If it is after hours, you may email the assessment directly to the tutor and/or convenor to avoid late penalties.
